Product Features

Honda HRX 476 XB cordless low noise mower

The HRX476 XB mower is part of the latest addition to the Honda **cordless range of lawnmowers**. It offers the best-in-class cut and collect performance from the 1.8kw motor and low friction cutting.

The HRX476 XB works with the **Honda universal battery system**. The system includes Thermo-smart technology for maximum performance. Offering perfect control at your fingertips for comfortable operation, with LED indicator, easy to select the drive, release button, quiet mode and check the battery indicator.

This mower features Honda's innovative Versamow™ system. It will either collect the grass cuttings into the bag or finely shred and blow them down into the lawn to **create a natural fertiliser** or the perfect mix of both.

We would recommend the 4Ah, 6Ah or the 9Ah battery* for this product.
