

# HONDA MIIMO 40 LIVE ROBOTIC LAWNMOWER

**~~£990.00~~ £809.00**

Product Type: **Robot Mower**  
Brand: **Honda**

## Product Features

**Honda Miimo robot mower** cuts your lawn so you don't have to.

Wondering what you get with the HRM40 Live over and above the HRM40? In one word, connectivity. Designed to make your life even easier with Miimo if that were possible. Check out the key features overview section to read more!

Our range of clever robotic lawnmowers are completely autonomous. They can look after your lawn without any assistance by following the layout of your garden which works off a perimeter boundary wire held in place by wire pegs. It uses a unique digital signal to guide itself round your garden, avoiding any possible interference from electronic devices nearby.

If you're concerned about slopes in your garden, this Miimo is able to cut on slopes up to 15° with its high level of traction and grip. Thanks to its rapid reaction lift sensors it will never get stuck in a hole or uneven ground.

It runs off a Lithium-ion battery (18V/2.5Ah), which offers a quiet, reliable and long lasting source of power, which is also very cost efficient to run, and emits zero emissions. This Miimo is able to mow a 400m<sup>2</sup> lawn within half a day.

It's clever enough that when it detects the battery is low it will take itself off to recharge. Then once it's recharged it will go and pick up where it left off. It's also quiet and efficient so Miimo can be set to work at night without disturbing you or your neighbours. And if that's not enough, it's also weatherproof – so rain or shine your Miimo can work undisturbed.

There's also no need to worry about safety as Miimo has 360° bump sensors. This means it will automatically stop its blades when it detects it's being picked up and will automatically turn away from garden obstacles or pets.

To protect from anti-theft all Miimo models can be protected with the use of a unique security code, which ensures it cannot be used by anyone else but you. It stops and sounds an alarm as soon as it is lifted and the machine will only restarts once your pin number has been accepted.

### ADDITIONAL KEY INFORMATION:

The approximate cut height range for this Miimo is 1.18 in. – 2.0 in. Ideally, the grass should be within the Miimo cut height range to ensure the best cut performance. We suggest using a traditional lawnmower for the first cut of the season then allow Miimo to take over.

Miimo can cross over sidewalks and driveways as long as they are level to the grass surface. If the pavement is higher than the grass, a boundary wire will need to be placed around these areas.

Miimo can only reach areas of your garden that are connected to each other. It cannot cross over a fence or a wall unless there is an opening available.

Miimo can handle most narrow passages. This Miimo needs at least 75cm wide passages to be able to navigate.

Your flowerbeds are safe with Miimo. Obstacles inside the lawn areas such as trees, islands, or flowerbeds are detected by creating loops around them using the boundary wire.

Honda Miimo robot mower can also cut around water features like ponds, fountains, and swimming pools. To be sure this Miimo does not accidentally slip into the water, the boundary wire must be 75cm away from the edge of the water.
